

ABSTRACT

A new condensed polycyclic compound represented by general formula [I]:

wherein R₁ is hydrogen, halogen, cyano, a substituted amino or a group selected from the group consisting of alkyl, aralkyl, aryl, heterocyclic, each having no
10 substituent or a substituent; and Ar₁ to Ar₅ are the same or different and are each independently a condensed polycyclic aromatic group or a condensed polycyclic heterocyclic group, each having no
15 substituent or a substituent is used for an organic light-emitting device that is extremely efficient in a light output with high luminance and is extremely durable.
